

B 1  
5. (Amended) The container with a hinged lid according to claim 36, wherein

the hinged lid is provided on its base end part with a pivot shaft, the pivot shaft is fitted in bottomed holes formed in the container body.

---

2  
B 34. (Twice Amended) The container with a hinged lid according to claim 36, wherein

a central part of the bottom wall is raised.

---

Sub. c' > B 36. (Amended) A container with a hinged lid comprising:  
a container body having (1) an upper wall with an opening defined therein, (2) a recessed portion along an edge of the opening of the upper wall on a side of a free edge of a hinged lid defined herein, the recessed portion forming a plane below the upper wall, and (3) a side wall integral with and extending in a diverging manner from the upper wall to define an open lower end;  
a bottom wall covering the open lower end of the side wall;  
a hinged lid pivotally attached to the container body in the vicinity of the opening, the hinged lid obstructing at least one edge of the opening of the upper wall, the hinged lid positionable to cover the opening of the upper wall;

---

an elastic biasing means between the hinged lid and the container body, whereby the biasing means urges the hinged lid away from the opening of the upper wall into an open position;

locking means on a free edge of the hinged lid; and

a lid operating device provided in the recessed portion, having a latching part facing the interior of the container body, the latching part for engaging the locking means, whereby the latching part releases the locking part when the lid operating device is operated in the recessed portion, thereby moving the latching part away from the locking means, and releasing the hinged lid.
